

String Comparisons and More "if" Statements.

Week 3 | Lecture 2 (3.2)

if nothing else, write `#cleancode`

This Week's Content

- **Lecture 3.1**
 - Booleans, Logic, & Conditional if Statements
- **Lecture 3.2**
 - **String Comparisons and More on if Statements**
- **Lecture 3.3**
 - Design Problem: Rock, Paper, Scissors, Lizard, Spock!

RECAP: Relational Operators

- Relational (or comparison) operators take two values (examples: `int`, `float`, `str`) and produce a `bool` value (True or False)

| Description | Operator | Example | Result |
|--------------------------|----------|---------|--------|
| Less than | < | 3<4 | True |
| Greater than | > | 3>4 | False |
| Equal to | == | 3==4 | False |
| Less than or equal to | <= | 3<=4 | True |
| Greater than or equal to | >= | 3>=4 | False |
| Not equal to | != | 3!=4 | True |

Boolean
Expressions

Boolean
Values

Python uses == for equality,
because = is used for assignment

String Comparisons

- Boolean comparisons can also be applied to strings, whether single characters or sets of characters
- Compare two strings by their **dictionary order**, comparing letter by letter

| Description | Operator | Example | Result of example |
|-----------------------|----------|----------------|-------------------|
| equality | == | 'cat' == 'cat' | True |
| inequality | != | 'cat' != 'Cat' | True |
| less than | < | 'A' < 'a' | True |
| greater than | > | 'a' > 'A' | True |
| less than or equal | <= | 'a' <= 'a' | True |
| greater than or equal | >= | 'a' >= 'A' | True |

Strings as Integers (ASCII Encoding)

- Each character in a string is actually represented by integers following the ASCII encoding
 - American Standard Code for Information Interchange
- All uppercase letters come before all lowercase letters
 - Uppercase "Z" is less than lowercase "a"

| Code | Char | Code | Char | Code | Char | Code | Char | Code | Char | Code | Char |
|------|---------|------|------|------|------|------|------|------|------|------|-------------|
| 32 | [space] | 48 | 0 | 64 | @ | 80 | P | 96 | ` | 112 | p |
| 33 | ! | 49 | 1 | 65 | A | 81 | Q | 97 | a | 113 | q |
| 34 | " | 50 | 2 | 66 | B | 82 | R | 98 | b | 114 | r |
| 35 | # | 51 | 3 | 67 | C | 83 | S | 99 | c | 115 | s |
| 36 | \$ | 52 | 4 | 68 | D | 84 | T | 100 | d | 116 | t |
| 37 | % | 53 | 5 | 69 | E | 85 | U | 101 | e | 117 | u |
| 38 | & | 54 | 6 | 70 | F | 86 | V | 102 | f | 118 | v |
| 39 | ' | 55 | 7 | 71 | G | 87 | W | 103 | g | 119 | w |
| 40 | (| 56 | 8 | 72 | H | 88 | X | 104 | h | 120 | x |
| 41 |) | 57 | 9 | 73 | I | 89 | Y | 105 | i | 121 | y |
| 42 | * | 58 | : | 74 | J | 90 | Z | 106 | j | 122 | z |
| 43 | + | 59 | ; | 75 | K | 91 | [| 107 | k | 123 | { |
| 44 | , | 60 | < | 76 | L | 92 | \ | 108 | l | 124 | |
| 45 | - | 61 | = | 77 | M | 93 |] | 109 | m | 125 | } |
| 46 | . | 62 | > | 78 | N | 94 | ^ | 110 | n | 126 | ~ |
| 47 | / | 63 | ? | 79 | O | 95 | _ | 111 | o | 127 | [backspace] |

Strings as Integers (ASCII Encoding)

- When you compare two strings, what you are really doing is comparing their numerical representations
- For example in ASCII the characters 'a' and 'w' are encoded as 97 and 119, respectively
 - The comparison 'a' > 'w' would translate to $97 > 119$, evaluating to **False**

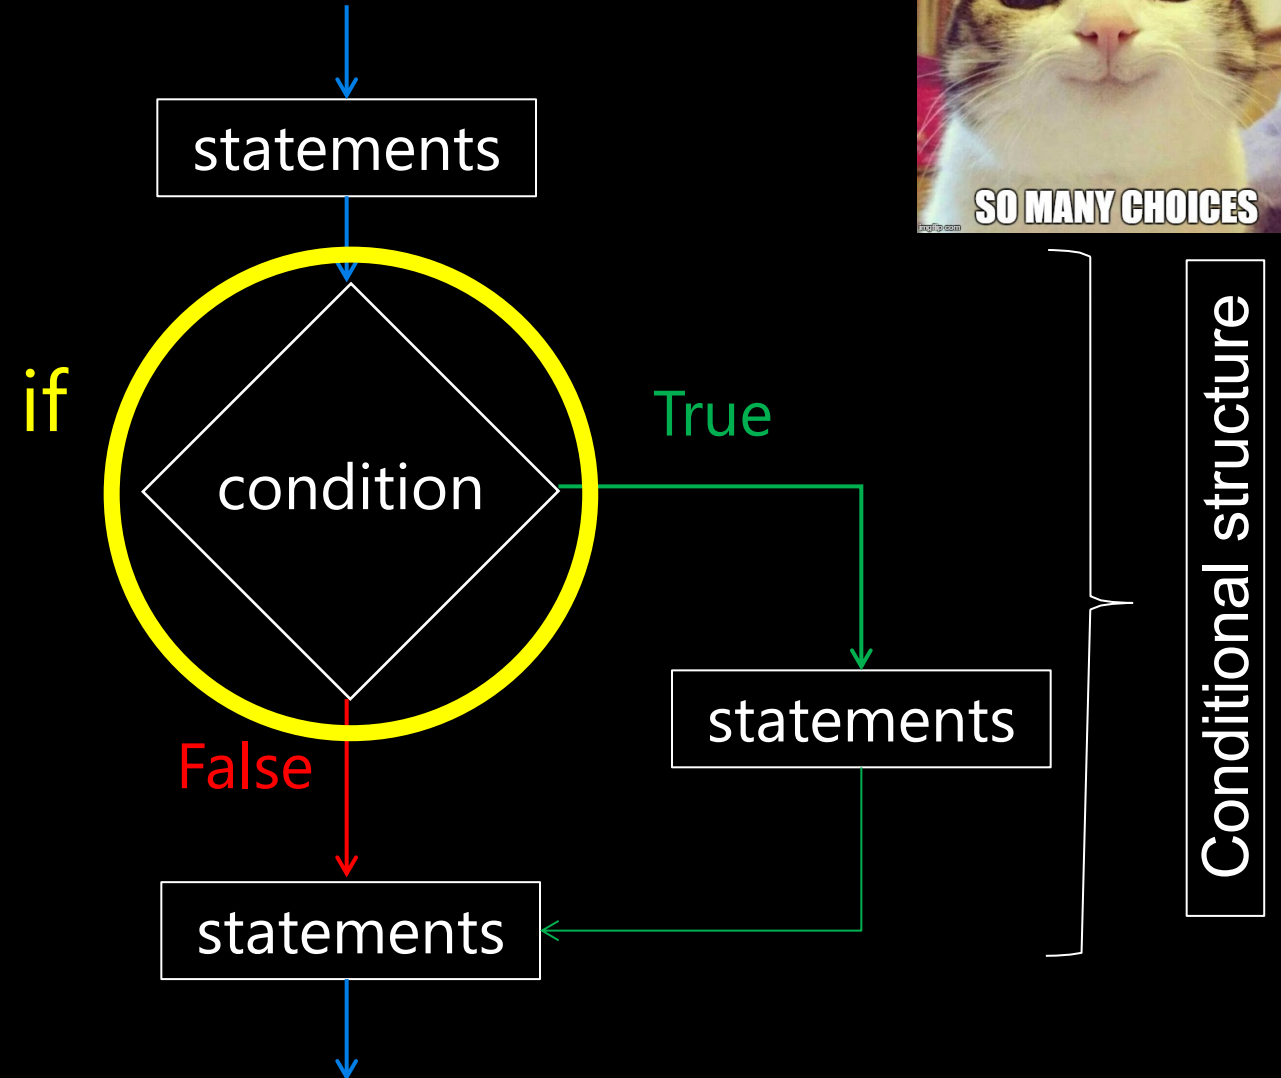

0-9
48-57

A-Z
65-90

a-z
97-122

RECAP: Making Choices

RECAP: Adding the else statement

- A more general form of the if conditional statement is:

```
if expression:  
    → body1  
else:  
    → body2
```

- ONLY 1 of body1 or body2 will be executed.
 - if statement is True, executes body1
 - if statement is False, executes body2

Adding the elif (else if) statement

- The most general form of the if conditional statement is:

if condition1:

→ body1

elif condition2:

→ body2

elif conditionN:

→ bodyN

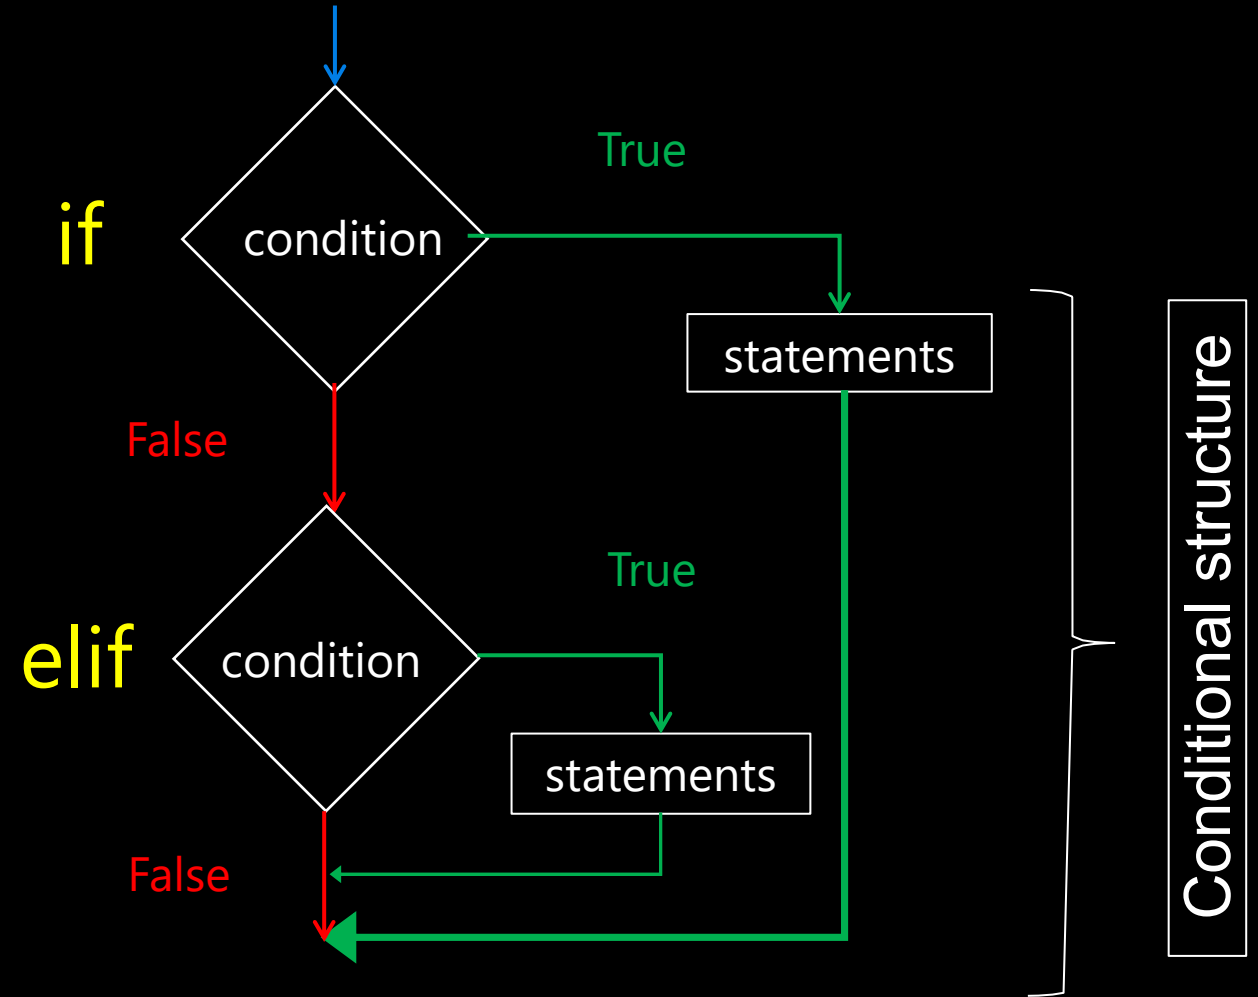

else:

→ other_body

- Note the colons (:) and the indents!
- ONLY 1 body will be executed.
 - if statement is True, execute body1, exits if structure
 - if statement is False, continue to elif statement
 - elif statement is True, execute elif body, exits if structure
 - elif statement is False, continue to next elif statement
 - All if's and elif's are False, execute else statement

Multiple if vs if-elif

Variables, Expressions and Operators.

Week 1 | Lecture 2 (1.2)

if nothing else, write `#cleancode`
